Alaska Facts and Figures

2017 Alaska Resident Leading Causes of Inpatient Hospitalization

The Alaska Facts and Figures tables were prepared by the Alaska Department of Health and Social Services, Division of Public Health, Health Analytics and Vital Records Section. These tables summarize inpatient discharge data from the Alaska Health Facility Data Reporting (HFDR) program for hospital discharges during 2017.

Additional Information

- The statistics provided in the tables reflect data based on hospital inpatient discharges for Alaska residents. Alaska hospitals are required to report their discharge data to the State of Alaska (7 AAC 27.660).
- These tables provide discharge counts and rates for hospital inpatient stays in Alaska.
 - The ICD-10-CM diagnoses are grouped into roughly 300 classifications using [Clinical Classification Software](#) (CCS) diagnosis categories.
 - The fifteen CCS categories that have the highest number of discharges for the year are ranked in the first (overall) table and the tables by *Sex*. The top ten discharge diagnosis categories are listed for each *Race* group, and the top three diagnoses are listed in the *Age Group* table and the *Regional Area* ([Public Health Region](#)) table.
- These tables also provide columns for *Billed Charges* with sum, median, and mean listed for each discharge diagnosis.
 - *Billed Charges* reflect charges billed by facilities. These do not include physician fees, and may differ from amount ultimately negotiated (or discounted) with insurance companies or other payers.
- In the final three tables, the diagnosis categories are ranked by the highest dollar amounts of the billed charges, with the top 15 categories displayed. The first table is ranked with the diagnosis category having highest sum of all billed charges first, the next table ranks the median charges, and the last table ranks the mean charges.
- Each hospital discharge is mutually exclusive, in other words, counted in only one *Clinical Classification Category*. However, a patient can have multiple discharges in a calendar year and will be counted for each discharge.
- These tables reflect the latest and most complete counts of hospitalizations. The data presented may differ from previous tables or reports due to late or corrected data submission to HFDR.
- Any rate based on fewer than 6 events is not reported, and any rate based on fewer than 20 events is statistically unreliable and should be interpreted with caution.
- Age-adjusted rates were adjusted by year 2000 standard population ratios. For more information see the Healthy People Statistical Notes on [Age adjustment using the 2000 projected U.S. population](#), January 2001.
- The single-race population estimates used to calculate rates in these tables are provided by the Alaska Department of Labor and Workforce Development, Research and Analysis Section, Demographics Unit.

Footnotes:

1. Aggregation of ICD-10-CM diagnoses with Clinical Classification Software (CCS) into clinically meaningful categories, developed as part of the Healthcare Cost and Utilization Project (HCUP).

2. Occurrences per 100,000 population.

3. Occurrences per 100,000 population, times year 2000 standard population ratio.

4. Billed charges reflect charges billed by facilities. These do not include physician fees, and may differ from amount ultimately settled on with insurance companies or other payers.

* Rates based on fewer than 20 occurrences are statistically unreliable and should be used with caution.

** Rates based on fewer than 6 occurrences are not reported.
